NOCTUNE

Light Rider · Progressive/alternative metal from Cologne and Koblenz, Germany

v2.1 · as of 2026-11-05 · info@noctune-band.de

1
DMX universe, channels 450–512 used by us

1
handoff point for DMX — at the console or on stage

14
days ahead: your fixture and DMX list

1 The important part first

We bring a few stage elements that we drive ourselves. Ideally we also integrate the venue's own lighting. For that we need all the information, documentation and a contact person as early as possible, so we can work out what is feasible. If more than one universe is needed, please tell us early.

If we cannot integrate everything, we are happy to provide cues for your technician — song by song in the **Show Rider Light Tech**. We want to deliver a good show and arrive as well prepared as possible.

2 What we need from you

- A DMX input at the lighting console. If there is none, stage access is enough for us to run a cable from our DMX splitter to the handoff point.
- Your light rider and the fixture or DMX patch
- Contact details of the light tech
- Clearance for fog, blinders and strobe — or a clear no

Please send this promptly, at the latest 14 days before the event. If anything is unclear, get in touch with us early.

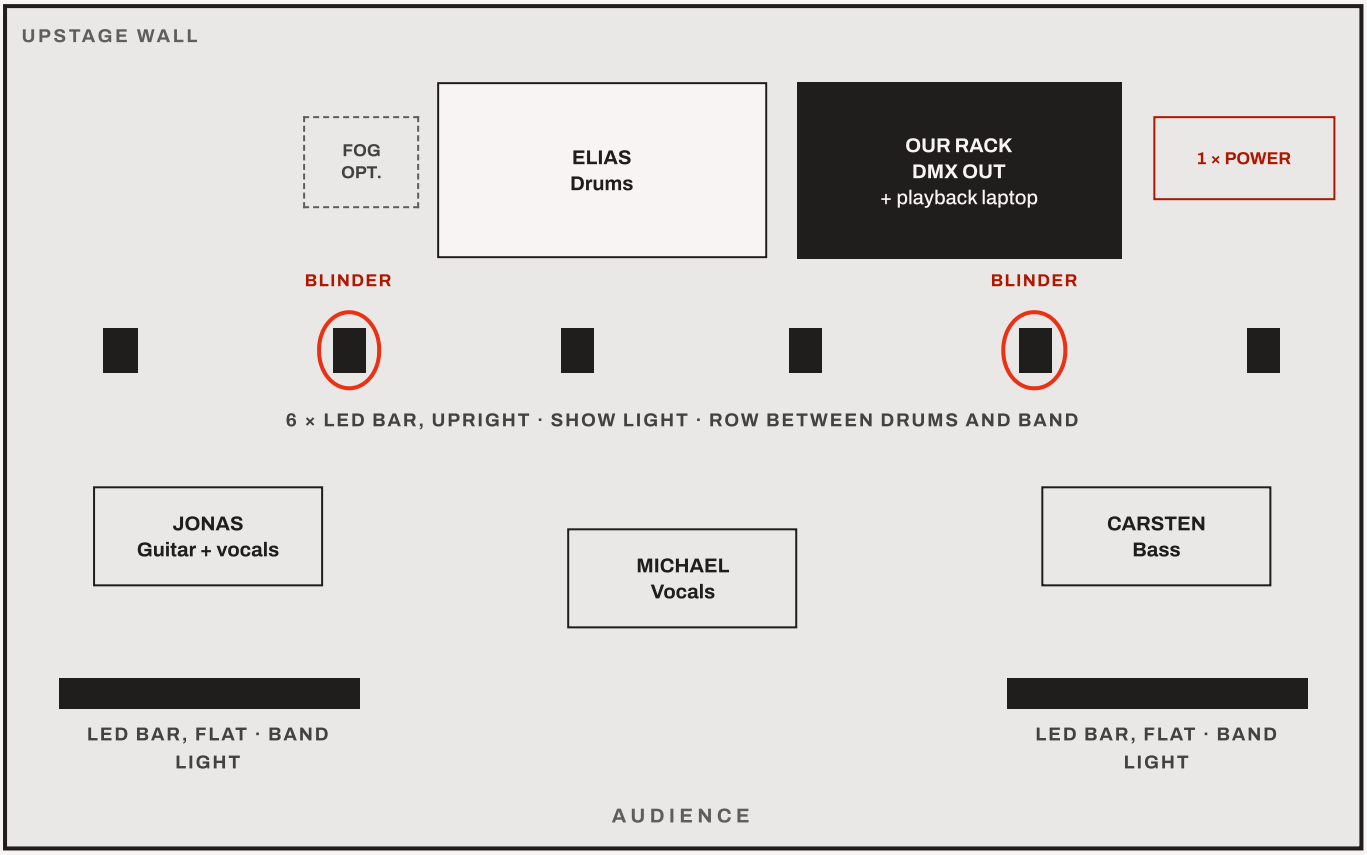

3 What we bring

1 ×	**Daslight DMX control**	1 universe, 512 channels, 450–512 used by us
6 ×	**LED bar as show light**	upright, in one row between the drum kit and the band
2 ×	**LED bar as band light**	lying flat, downstage left and right
2 ×	**Stairville Wild Wash as blinders**	on top of bars 2 and 5 of the upstage row · optional
1 ×	**Stairville AF-180 LED fogger**	CO2 FX, DMX · optional, only with clearance
1 ×	**DMX splitter and cabling**	up to the handoff point

4 Nice to have — if the house has them

- Moving Heads
- Washlights
- Blinders — towards the audience and/or front-on at us
- Hazer

5 Stage plot — top view

Schematic, not to scale, matches stage plot v1.2. The six bars stand upright, the blinders sit on top of bars 2 and 5. Rack, playback laptop and the one power outlet sit by the drum kit. We are flexible on stage size — please send us the dimensions beforehand.

6 Operation by your light tech

Your light tech is welcome to join our WLAN with a tablet — we provide one if you do not have it — and use the Daslight app. What we prepare is essentially a fog button; beyond that you get full access to Daslight, including strobes, blinders and the remaining scenes. Strobe, blinders and fog only with local clearance; keep front light steady during vocals.
